

AI Product Manager

Mikhail Semenov · Михаил Семёнов

I own the product and move it through thoughtful AI adoption. I ship end-to-end with AI coding agents, validating hypotheses in days, not sprints.

SUMMARY

AI Product Manager at **Prof-IT** since early 2022. I launched and run the group's new product — **voice AI agents for B2B** — end-to-end across product, UX, and engineering. I embed AI where it does the real business job, not where it looks good in a demo, and I build alongside AI coding agents (Claude Code, Codex) to validate hypotheses in days.

500,000+

minutes of new-customer conversations handled in 2026 by the voice AI product I lead. AI agents convert 40% better than the previous IVR robots and lifted the service's average check by 30%.

EXPERIENCE

Zvonobot / Prof-IT — Product Manager

Feb 2022 — now · Perm

Project 1 — SaaS voice AI-agent platform (0→1, head of a new product line)

- **Validated demand before building:** tested the hypothesis on live clients through an early integration; AI agents drove customers to the target action 40% better than IVR robots. Only then did I kick off the platform.
- **Business impact:** launching AI agents lifted the service's average check 30% — AI closed jobs the old tools couldn't and opened a segment of clients with more complex scenarios.
- **Product end-to-end:** designed it as a standalone product — client console, agent and dialog-script builder, call campaigns, telephony, per-second billing, client wallets, and call analytics — wiring best-in-class LLM, ASR, and TTS into one managed product layer.
- **From "robot" to business outcome:** added automatic post-processing of every dialog — lead and target-action detection, business-field extraction, per-campaign analytics — turning a dialer into a tool the business measures in leads and revenue, not minutes.
- **Unit economics & pricing:** built a transparent model (per-second pricing, wallets, bonuses), spend reconciliation, and profitability control per call type so revenue growth isn't eaten by cost.
- **Roadmap:** shaped and prioritized the backlog from user-behavior data, call economics, and company strategy.

Prof-IT — AI transformation (internal)

2022 — now

Project 2 — bringing AI into the company's own workflows

- **Tech leadership:** first in the company to introduce LLM-based tooling to speed up business processes and product development; other teams now come to me to automate their work through AI.
- **MVP in 2 days:** solo-built a voice-bot prototype on the OpenAI Realtime API in two days, proved the value, and handed it off to full development with a ready use case.
- **Speed of delivery:** built an internal web tool over the client database in 4 days, alone — skipping the usual weeks-long spec-and-approval chain — and later grew it into a client-facing feature.

Fodoj UG (Germany) — iOS / UI Developer

Nov 2020 — Jan 2022

Time-tracking SaaS for the EU market (claimora.com)

- Built UI components for the web app; focused on the Spanish market — interface localization, local reporting and compliance.
- Improved UX across mobile and desktop; ran tests with Spanish-speaking users.

SELECTED PROJECTS

Zvonobot AI FLAGSHIP · LIVE

Multi-tenant voice AI-agent platform for B2B over telephony. Launched in 2026, run end-to-end. rebsem.ru/projects

obrabot INTERNAL

Internal voice-AI analytics dashboard at Prof-IT — AI segments calls and surfaces what needs attention.

cursivo LIVE

AI-powered CRM for car rental — fleet, bookings, contracts; AI reads documents, scores deal risk, suggests next steps. cursivo.xyz

Pet projects 1-7 DAYS EACH

bazabot, Zodial, Slopiq, tubedrop, portfo — idea to a working release in days, built with AI agents. github.com/RebSem

CORE SKILLS

PRODUCT

Product discovery · strategy · roadmap · metrics & unit economics · CustDev · B2B SaaS · go-to-market

DELIVERY

Spec → review → ship · agent-native (Claude Code, Codex) · Lean Startup · 0→1 · fast hypothesis validation

OPEN TO

AI Product Manager roles where I own the product and grow it through thoughtful, purposeful AI adoption — in any domain where AI solves a real business job. Remote-first, GMT+5, open to relocation.
