SUMMARY

Product manager, 4.5 years in B2B SaaS. Launched a voice AI agent line from scratch to 80 paying customers, 500,000+ minutes in production and ~10% of group revenue in under a year. Owned pricing, unit economics and new line launches; priorities, specs and acceptance for a team of 4 engineers were mine. Started as a developer, so I speak engineering. Looking for my next product role and can start immediately.

NUMBERS

- **~10%** of group revenue came from a line launched from scratch in a year
- **80** paying B2B customers
- **500,000+** minutes of conversations in production
- **+30%** average spend among customers who moved from the scripted robot to AI agents
- **30%** of line revenue came from repeat purchases
- **130+** countries: the group CPaaS products, bulk calls and SMS

EXPERIENCE

Product Manager, Zvonobot (Prof-IT Group) · Feb 2022 - Oct 2026

Zvonobot is a B2B call automation platform: voice bots and AI agents for lead generation, sales outreach and customer reactivation.

Zvonobot AI (Oct 2025 - Oct 2026)

- ~10% of group revenue in under a year: 80 paying B2B customers and 500,000+ minutes of live conversations in production by August 2026. Repeat payments brought 30% of the line revenue.
- From scratch to market in weeks: launched Zvonobot AI · https://rebsem.ru/projects/zvonobot-ai-en/, the voice AI agent line, on a white-label platform and proved demand with live customers. Then made the case, with numbers, for an in-house, more flexible platform and started moving the line onto it.
- +30% in average spend among Zvonobot customers who moved from the legacy linear IVR robot to AI agents, averaged since sales began; part of the growth is price: the agents cost more than the robot. On warm lead lists, AI agents beat the legacy robots on conversion to the target action in our tests, which became the basis for pricing.
- The full product suite of the line: agent and script builder, LLM call analytics · https://rebsem.ru/projects/obrabot-en/ (outcome, sentiment, custom post-call fields), per-second billing plans by cost component (LLM, ASR, TTS), balance hold at campaign start.

- A product team of 4 engineers: engineering reported to the tech lead, while priorities, specs and acceptance were mine. Set quarterly OKRs for the line and defended them with leadership.
- The sales team grew from 4 to 15 people to sell the line: I ran go-to-market with stakeholders in sales, support and finance, and trained sales and support on the product weekly. Owned pricing, plans, per-call-type margins and the product's unit economics.

Core platform (2022-2025)

- The core B2B SaaS platform end to end: self-service customer console, campaign creation and lead-list targeting, script builder, telephony, per-second billing, wallets, reporting and call analytics. Prioritization by metrics and data.
- 130+ countries, bulk calls and SMS: ran the group CPaaS products, Effebot (Zvonobot's international brand) and P1SMS. Traffic routing across providers, billing, API integrations.
- Took over the virtual PBX line: connecting businesses to it as an adjacent product for existing call and SMS customers.
- A full discovery and delivery loop: customer interviews, hypotheses formulated and defended with metrics, A/B testing of call scripts, effect sizing before development, decomposition and PRDs, a cross-functional release cycle run jointly with sales, support and engineering.
- A voice bot MVP on the OpenAI Realtime API in 2 days and an internal analytics tool over the database in 4 days: brought LLM tooling and AI-assisted prototyping into company workflows. Still work with Claude Code and Codex every day.

iOS / Frontend Developer, Fodoj UG (Germany) · Nov 2020 - Jan 2022

- A web product for the EU market: a self-service web account, Spanish localization, reporting and compliance features, usability testing.

SKILLS

ROLES

Product Manager, Product Owner

PRODUCT

product strategy and roadmap, discovery, customer interviews, metrics and product analytics, unit economics (LTV, CAC, retention and churn, average spend), pricing and monetization, A/B experiments, hypothesis validation, go-to-market, OKRs, stakeholder management, B2B SaaS, CRM

AI AND LLM

generative AI (GenAI), voice AI agents, conversational AI, LLM orchestration, prompt engineering, LLM evals, ASR, TTS, contact centers, SIP telephony

DELIVERY

PRDs and specs, decomposition, acceptance criteria, reviews, release cycle, working with engineers and sales, fast hypothesis validation, 0 to 1

TOOLS

Jira, Confluence, Figma, Yandex Metrica, PostHog

AI TOOLS

Claude Code, Codex, prototyping with AI agents

TECHNICAL

SQL, Python, TypeScript, REST, integrations, telephony (SIP)

WHAT I AM LOOKING FOR

A Product Manager or Product Owner role on a product team. Domains where my experience works from day one: B2B SaaS, AI and LLM products, payments and billing, telecom and CPaaS, infrastructure platforms with integrations and APIs. I am at my best where a product needs to be launched from scratch or taken from MVP to growth.

EDUCATION, LANGUAGES, FORMAT

EDUCATION

Perm State University, 2022.

LANGUAGES

Russian: native. English: B2, working correspondence and documentation daily, confident on work calls.

WORK FORMAT

Remote from Perm (GMT+5), open to relocation (Cyprus, EU, UAE), available for business travel. Full-time, or contract as a self-employed contractor or via an EOR, invoices in USD or EUR, can start immediately.
