SUMMARY

Product manager with an engineering background, 4.5 years in product. Launched Zvonobot AI, a B2B voice AI agent line, from zero to 80 paying business customers and 500,000+ minutes of live conversations in production in under a year. Lead the product team of 4 engineers, set quarterly goals for the line, own pricing, unit economics and go-to-market. Prototype with AI coding agents in days. Open to full-time or contract work; can start within 2-4 weeks.

NUMBERS

- **80** paying B2B customers: repeat payments account for 30% of the line revenue.
- **500,000+** minutes of conversation: handled by the voice AI agents in production.
- **4 → 15** people on the sales team: grew to sell the line in under a year.
- **+30%** average customer spend: growth in average spend after the AI plans launched.

EXPERIENCE

Product Manager, Zvonobot (Prof-IT Group) · Feb 2022 - Present

Zvonobot is a B2B call automation platform: voice bots and AI agents for lead generation, sales outreach and customer reactivation.

Zvonobot AI (fall 2025 - present)

- Launched Zvonobot AI, the voice AI agent line, from scratch: went to market on a white-label platform in weeks, proved demand with live customers, and made the case to build an in-house platform.
- By August 2026: 80 paying business customers and 500,000+ minutes of live conversations in production. Retention of the paying base: 30% of the line revenue comes from repeat payments.

- The hypothesis "AI plans will lift average spend" was confirmed after launch: +30%. AI agents consistently outperform legacy robocalls on conversion to the target action on warm lead lists, which became the basis for pricing.
- Built the AI product suite: agent and script builder, LLM call analytics (outcome, sentiment, custom post-call fields), per-second billing plans by cost component (LLM, ASR, TTS), balance hold at campaign start.
- Lead the product team of 4 engineers: engineering reports to the tech lead, while priorities, specs and acceptance are mine. Set quarterly OKRs for the line and defend them with leadership.
- Run go-to-market with stakeholders in sales, support and finance: the sales team grew from 4 to 15 people to sell the line, and I train sales and support on the product weekly. Own pricing, plans, per-call-type margins and the unit economics of the line.

Core platform (2022-2025)

- Owned the core B2B SaaS platform end to end: self-service customer console, campaign creation and lead-list targeting, script builder, telephony, per-second billing, wallets, reporting and call analytics; prioritized by metrics and data.
- Launched a virtual PBX as a complementary product to raise customer retention.
- Set up discovery and delivery: customer interviews, hypotheses formulated and defended with metrics, A/B testing of call scripts, effect sizing before development, decomposition and PRDs, a release cycle run jointly with sales, support and engineering.
- Introduced LLM tooling and vibe coding across company workflows: built a voice bot MVP on the OpenAI Realtime API in 2 days and an internal analytics tool over the database in 4 days; work with Claude Code and Codex daily.

iOS / Frontend Developer, Fodoj UG (Germany) · Nov 2020 - Jan 2022

- Shipped a web product for the EU market: a self-service web account, Spanish localization, reporting and compliance features, usability testing with users.

PRODUCTS

Zvonobot AI

A B2B voice AI agent platform: agent builder, campaigns, telephony, per-second billing.

Proves a line taken from zero to 80 paying customers in under a year.

[Case study\(rebsem.ru/projects/zvonobot-ai-en/\)](https://rebsem.ru/projects/zvonobot-ai-en/)

cursivo

An AI CRM for car rental, live in production: reads client documents, scores deal risk, suggests the next step.

Proves I take a product to live users outside the day job.

[Case study](https://rebsem.ru/projects/cursivo-en/)(rebsem.ru/projects/cursivo-en/) [Live](https://cursivo.xyz)(<https://cursivo.xyz>)

obrabot

An internal voice AI analytics console: an LLM segments calls and surfaces what needs human attention.

Proves LLM analytics built on top of real production data.

[Case study](https://rebsem.ru/projects/obrabot-en/)(rebsem.ru/projects/obrabot-en/)

pet projects

Side projects built personally with AI coding agents (Claude Code, Codex) in 1-7 days from idea to a working release.

Proves hypothesis-validation speed and a shared language with engineers.

SKILLS

ROLES

Product Manager, Product Owner

PRODUCT

product strategy and roadmap, discovery, customer interviews, metrics and product analytics, unit economics (LTV, CAC, retention, average spend), pricing, A/B experiments, hypothesis validation, go-to-market, OKRs, B2B SaaS, CRM

AI AND LLM

voice AI agents, conversational AI, LLM orchestration, prompt engineering, RAG, LLM evals, ASR, TTS, contact centers, SIP telephony, AI tools in daily work

DELIVERY

PRDs and specs, decomposition, spec, review, release cycle, working with engineers and sales, prototyping with AI coding agents (Claude Code, Codex), fast hypothesis validation, 0 to 1

TOOLS

Jira, YouTrack, Notion, Confluence, Figma, Miro, Yandex Metrica, PostHog

TECHNICAL

SQL, Python, TypeScript, REST, integrations, telephony

EDUCATION, LANGUAGES, FORMAT

EDUCATION

Perm State University, 2022.

LANGUAGES

Russian: native. English: working proficiency, daily written use, comfortable on work calls.

WORK FORMAT

Remote from Perm (GMT+5), open to relocation (Cyprus, EU, UAE), available for business travel.
Full-time or contract (self-employed), can start within 2-4 weeks.

Updated: 19 August 2026
